

PRACHI JAMDADA

Pune, India | +91 9850918989 | prachijamdade84@gmail.com | linkedin.com/in/prachi-jamdade-3155ab32b

SUMMARY

Full-stack developer focused on building reliable systems that integrate backend logic, AI-driven workflows, and real-world constraints. Experience working with Android, web technologies, and LLM-based systems, with a focus on system behavior, scalability, and deployment using containerized environments.

EDUCATION

B.Tech — Artificial Intelligence & Data Science Vishwakarma Institute of Technology, Pune CGPA: 8.64 / 10	2024 – 2027
Diploma — Computer Engineering Government Polytechnic Tasgaon 92.69%	2021 – 2024

PROJECTS

TalentForge — AI-Powered Skill Assessment Platform	<i>Python · Node.js · LLM · React</i>
- Built an AI-powered skill assessment platform using full-stack architecture and LLM-based evaluation - Designed dynamic evaluation workflows to assess real-world problem-solving instead of static answers - Focused on ensuring consistency and reliability of outputs across varied inputs	
POZTX — AI-Assisted Social Content Management System	<i>React · Node.js · Express · MongoDB · Docker</i>
- Built an AI agent to help businesses generate and manage content workflows - Developed full-stack system integrating backend logic with user-facing interfaces - Containerized application using Docker for consistent deployment environments	
MemCP — Custom Memory Component for Long-Horizon AI Agents	<i>Python · Docker · Agent Systems</i>
- Identified and addressed context-window exhaustion as a core failure mode in multi-step AI agents; built a structured memory layer that persists and retrieves relevant state across long interaction chains. - Validated system behavior using Docker-based test environments that replicate extended agent sessions, enabling reproducible failure detection across memory boundary conditions. - Designed retrieval logic to prioritize recency and task-relevance over raw chronology, improving agent coherence in sessions exceeding typical context limits.	
EVFinder — Real-Time EV Charging Station Locator (Android)	<i>Java · Android SDK · REST APIs</i>
- Built Android application to locate nearby EV charging stations using real-time location data - Integrated REST APIs and optimized request handling to maintain responsiveness under frequent location updates	

SKILLS

Languages: Java, Python, C, C++	Frontend: React, HTML, CSS	Backend: Node.js, Express, PHP
Database: MongoDB, MySQL	DevOps & Tools: Docker, Docker Compose, Git, Postman	
Concepts: Data Structures & Algorithms, System Design, REST API Design, Containerization, Agent Architecture		

EXTRAS

- Winner — Mock Placement Drive (Walchand College of Engineering, Sangli)
- App Development (Java) Coordinator — Team Quark, VIT Pune
